1. exercise

print out strings (range 1 to 100):
“1, 2, 3, 4, Fizz, 6, Buzz, 8, ... 34, FizzBuzz, 36, ... 97, Buzz, 99, Fizz”

with the following requirements:

- if we can divide the number by 5, print "Fizz";
- if we can divide number by 7, print "Buzz"
- if we can divide number by 5 AND 7, print "FizzBuzz"
- otherwise: just a number

2. exercise:

- ask the height (integer) of the Christmas tree;
- print the Christmas tree:

*Example (*height = 3*)*
Print out result:

```
  *
 ***
*****
```

3. exercise

- write the function add_mult with 3 arguments;
- the function returns the sum of the 2 smallest values multiplied by the largest value

example:
add_mult(2,5,4)
result: 30
*(2+4)*5 = 30*

4. exercise

- write the function is_palindrome(text);
- the function must return true or false;
- the function must ignore white (blank) spaces and capital/small letters.

Example:

is_palindrome (“Never   odd or   even”) → *True*

A **palindrome** is a word, number, phrase, or other sequence of characters which reads the same backward as forward, such as *madam*, *racecar*.
