

All tasks must be written in 1 file

1. exercise

- Write a program that asks for a username;
- Use this username, to ask how old the user is;
- Calculate and print out how many years it takes to reach your 100th birthday.

2. exercise

- Ask 3 questions about the width, length, height of the room;
- Calculate and print out the volume of the room.

3. exercise

Write a program that requires a temperature in Celsius and print that temperature on the Fahrenheit scale.

$$fahrenheit = 32 + celsius * (9/5)$$

4. exercise

Write a program that checks the user's temperature.

- if the user enters numbers from 35 to 37, print “everything looks good”;
- If the user enters < 35, print “Too cold”;
- If the user enters > 37, print “Too hot”.

5. exercise

- Write a program that prompts the user for 3 numbers;
- Sort numbers in ascending order, but you can only use if..elif..else
